I need to know the color codes of the wires in a 1990 Jeep Wrangler to hook up an aftermarket stereo. Here is a detailed guide on how to do it:

1. **Start by locating the radio connectors**.
   - The radio in my 92 Jeep Wrangler was installed at a dealership.
   - I just put a radio in my 92 Jeep Wrangler and I was having some problems if you look under the dash on each side where the speakers are you can see which colored wires are which.

2. **Identify the hot wires**.
   - Check the wiring diagram to find the hot wires.
   - In my case, the hot wire for the radio is gray.

3. **Connect the hot wire to the ignition switch**.
   - Use a male connector to connect the hot wire to the ignition switch.
   - The ignition switch in my vehicle is on the firewall.

4. **Check for proper relay operation**.
   - Once the hot wire is connected, check if the relays are working properly.
   - I could hear any relays or a fuel pump working once it starts up it runs fine and also I notice that when i try to start up the engine there is no response.

5. **Adjust the wiring as needed**.
   - If the relays are not working, adjust the wiring as needed.
   - In my case, I had to slightly customize the color of the wires to make them compatible.

6. **Final check**.
   - After adjusting the wiring, give the coil some saturation time to produce a hotter spark.
   - I have a solenoid on the firewall not even a slight clue as to what all the wires are that are connected to it that if i remember right had a wire going to the stock starter.
